Project Management

Certificate in Applied Project Management 403B

24 sessions

Our Certificate in Applied Project Management is designed to help professionals accelerate their personal and company success. With a focused curriculum taught by skilled project management practitioners, the program enables students to acquire new skills and apply them immediately to their career. The evening format is particularly suited to today's professional, who can't afford to take time away from an already crowded schedule.

Requirements to earn your Certificate

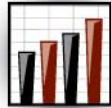

- *Attendance is Mandatory for classes 1, 3 and 24*
- *Miss no more than four classes (non-consecutive)*
- *Work in a team environment on a real-world project, and participate in a final presentation to the class*
- *Access to e-mail for communicating with team members and staff*
- *Make payment in full*
- *Students should expect to take five quizzes throughout the course. Students must maintain a cumulative average of 70%*

WHO SHOULD ATTEND

- Professionals with at least two years experience working in a project management environment
- Individuals who are working on project teams

COURSE OBJECTIVES

Our evening program focuses on a real-world project format. This unique format allows tools and techniques taught in class to be practiced within the framework of your current business. This program will identify problems currently faced in business and work to solve them throughout the program. The evening format provides the chance to try techniques without the expense or risk to your company or projects. Real-world projects are the hallmark of our evening certificate program.

Projections Consulting, Inc.

Project Management

Throughout the 24 classes, we will address key topic areas in project management, including:

The project environment
Project risk and quality
Initiating the project
Tracking project implementation
Project planning
Reporting status and closing out the project
Scheduling and estimating

This program is not a classroom lecture. You will work in teams to plan a real-world project. The team environment amplifies and accelerates your learning. It also prepares you to manage your projects in the work environment.

LESSON TOPICS

- Expected results gained from using this model will range from reduced lead times, market responsiveness, controlled costs and customer satisfaction, as well as enhanced productivity and organizational effectiveness.
