## **Certificate in Applied Project Management 403D**

**12 Sessions**

*Our Certificate in Applied Project Management is designed to help professionals accelerate their personal and company success. With a focused curriculum taught by skilled project management practitioners, the program enables students to acquire new skills and apply them immediately to their career.*

*Our program focuses on a real-world project format. This unique format allows tools and techniques taught in class to be practiced within the framework of your current business. This program will identify problems currently faced in business and work to solve them throughout the program. The format provides the chance to try techniques without the expense or risk to your company or projects. Real-world projects are the hallmark of our evening certificate program.*

### **WHO SHOULD ATTEND**

- Professionals with at least two years experience working in a project management environment
- Individuals who are working on project teams

### **COURSE OBJECTIVES**

Throughout the 12 classes, we will address key topic areas in project management, including:

The project environment  
Project risk and quality  
Initiating the project  
Tracking project implementation  
Project planning  
Reporting status and closing out the project  
Scheduling and estimating

### **LESSON TOPICS**

- Expected results gained from using this model will range from reduced lead times, market responsiveness, controlled costs and customer satisfaction, as well as enhanced productivity and organizational effectiveness.
